

Network, Server & Systems Administrator – (IT Technical Support)

Job Description

ASPwebhosting.com, a fully-managed, dedicated server hosting website, is seeking highly-skilled and self-motivated Network, Server & Systems Administrator who lives within 45 minutes driving distance of our downtown Louisville, Kentucky data center. This challenging, lucrative and rewarding role requires excellent analytical and troubleshooting skills as you will support a global customer base across a multifaceted service platform. The Network, Server & Systems Administrator will provide direct technical support to international customers for applications and email.

Network, Server & Systems Administrator – (IT Technical Support)

Job Responsibilities

As a Network, Server & Systems Administrator for ASPwebhosting.com, you will install, setup and administer Windows & Linux servers, as well as IIS, Apache, SQL server, MySQL and Zimbra mail servers for a variety of application services. You will also handle basic software source code troubleshooting, such as ASP, ASP.NET, Basic and C#.

Additional responsibilities for the Network, Server & Systems Administrator include:

- Performing TCP/IP network cabling, configuration and troubleshooting
- Installing and configuring rack hardware
- Troubleshooting emails for both applications and end users
- Being on-call for shifts, including occasional holidays
- Completing daily timesheets and activity logs

Network, Server & Systems Administrator – (IT Technical Support)
